WHAT IT SOLVES

Wide, flat and with the best contrast in the line

4000:1 contrast
The highest in the office line: blacks look deep and white text stands out effortlessly.

Ultrawide 3440 x 1440
A third wider than a regular monitor: three windows side by side without splitting the screen.

A billion colours
1.07 B instead of 16.7 million: smooth gradients, without the banding of an 8-bit panel.

Four video inputs
Two HDMI and two DisplayPort: work PC, laptop and console connected at the same time.

Flat or curved in 21:9: on a 34-inch ultrawide, a curve wraps around your view and shines in gaming; a flat panel, on the other hand, does not bend straight lines at the edges. For spreadsheets, drawings, code or a video timeline —where everything is straight lines— flat is the right choice. That is why both 34" versions exist.
